SECTION C – Analysis of language use**Instructions for Section C**

Section C consists of **two** parts.

Parts 1 and 2 are equally weighted.

Carefully read the material on pages 12 and 13 and then complete **both** parts 1 and 2.

Your response will be assessed according to the criteria set out on page 14 of this book.

Section C is worth 30 marks.

TASK**Part 1**

Write a note-form summary of the article ‘**Exploring our dreams**’ found on pages 12 and 13.

Your response must be in **note form**. Do not use complete sentences.

Part 2

Write a piece of prose that explains how language and visual features have been used to attempt to persuade the readers about **three** of the main points in any part of the material on pages 12 and 13. You may choose points in ‘**Exploring our dreams**’ or ‘**Off the planet**’ or both.

Background information

Yvette Yergon writes for a newspaper. Recently she viewed an exhibition on space exploration presented by an international group of thinkers known as *Kolombus-21*. Her article ‘Exploring our dreams’ presents her response to the exhibition.

The letter to the editor titled ‘Off the planet’ was sent to the newspaper after the article was published. It gives the views of one reader.

Use **only** the article 'Exploring our dreams' for your note-form summary.

Exploring our dreams

Yvette Yergon

Space is not as far away as it seems. If you live in Victoria, you are closer to space than you are to Canberra. Space is only about 160 kilometres straight up. I've been thinking about space exploration this week after I had the pleasure of visiting an exhibition presented by an international group known as *Kolombus-21*. This is a group of influential thinkers who have been encouraging governments across the world to work together on space exploration in the twenty-first century.

After looking at the displays in the exhibition I was reminded of how inspiring exploration can be. It seems to be in human nature to dream about what's beyond the world we know. Setting out to explore the unknown is the biggest thing we do. After all, the great fifteenth-century explorer Christopher Columbus set off in a wooden ship, powered only by the wind, with only his own skill and courage and the stars to guide him. That's pretty inspiring.

Six centuries later, most of us rightly admire the bravery of astronauts who have taken the risk of exploring beyond Earth.

But space exploration costs a lot of money. Governments need reasons other than the thrill of discovery if they are going to spend the huge amounts of money needed to continue exploring in space. Perhaps there's a new mining boom waiting to happen in space, with people looking for more of the minerals we already know and maybe some we haven't dreamed of yet.

Evidently there are almost unlimited mineral resources out there in space, waiting to be claimed, and nobody owns them. The United Nations was surprised recently when a company tried to claim ownership of an asteroid. There aren't any laws

about property ownership in space. It is easy to understand why people might be interested in these lifeless rocks. Recently scientists reported on an asteroid that contains about 10,000 tons of gold and even more platinum, to the value of about a trillion dollars. Unfortunately it is about 32 million kilometres away, but that doesn't seem to stop people dreaming.

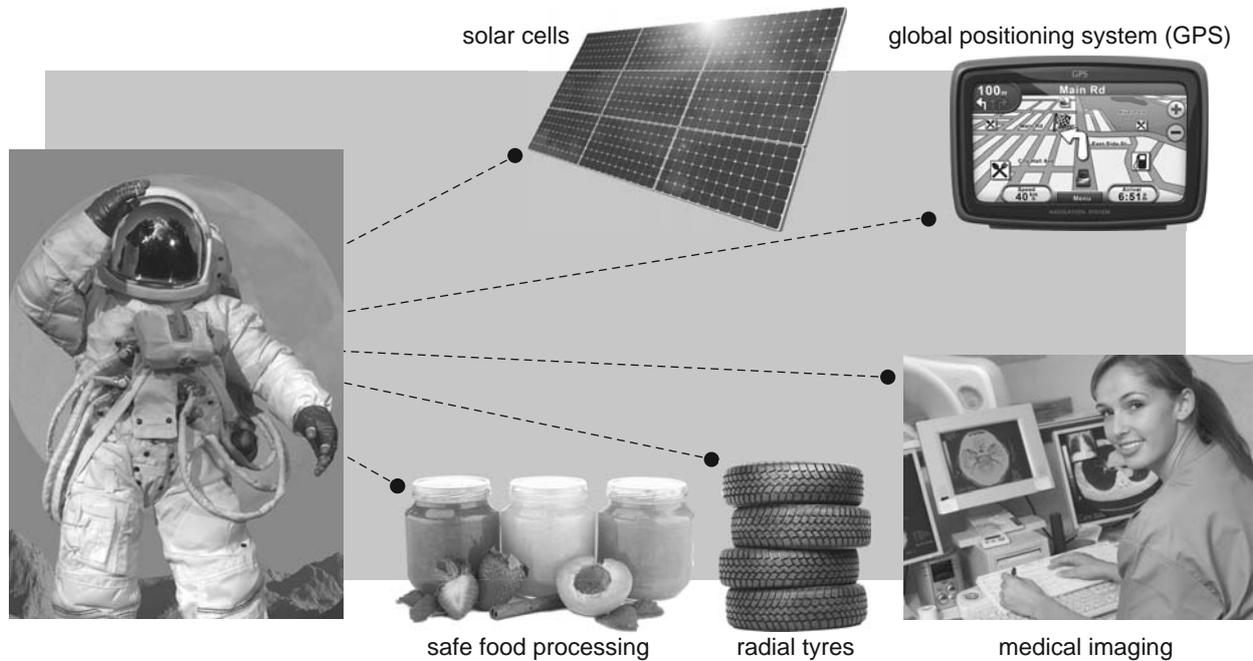

One day such dreams might come true. This exhibition helped me to realise that it is important to search for new answers to our problems to protect the future of life on Earth. That means taking risks and meeting the unexpected.

Columbus certainly met the unexpected. He expected to sail through to India but bumped into North and South America instead.

And of course good things can come out of exploring the unknown. Many countries have spent a lot on space exploration and plenty of products we use today were developed from research associated with space programs. These benefits could not have been predicted at the time of this investment in space exploration.

Kolombus-21 values international cooperation. Space exploration used to be more competitive than

cooperative. That wasn't very helpful. Now we have an international space station supported by 15 nations, so now is the time to explore further and turn the unknown into useful knowledge. There's a strong view that it's time to inspire the next generation of scientists. Every government knows we've got to do this, just as we've got to invest in the next generation of technology. That's where the answers to the world's big problems are going to come from.

The tour guide explained that the group's name, *Kolombus-21*, was chosen to honour Columbus but also because it means 'dove', the international symbol of peace. I can see the point. Future space exploration must be done for the whole planet and for peaceful purposes. Perhaps with big dreamers like *Kolombus-21* working towards this goal we can be confident that it will happen in this way.

This letter to the editor was sent to the newspaper after the article was published.

Off the planet

Yvette Yergon seems to think we can solve the big problems of the world, such as hunger, disease and the environment, by leaving Earth and finding somewhere better. She wants governments to spend trillions of dollars based on this false belief.

Wake up, Yvette! When did governments or kings or emperors ever spend money on exploring for peaceful purposes or the good of the world? Columbus's ships were driven by greed as well as wind. People's dreams were of more and more

wealth. Nothing seems to have changed. Today's challenge is to make sure that the precious planet we call home doesn't become like a lifeless asteroid.

You know what I find truly inspiring? The idea of getting all the governments in the world to agree to keep working together on our problems on Earth, one by one, until they are solved. This might be only a dream now – but it's a dream worth pursuing.

Examination assessment criteria

The examination will address all the criteria. Student responses will be assessed against the following criteria:

Section A – Text response

- detailed knowledge and understanding of the selected text, demonstrated appropriately in response to the task
- development in the writing of a coherent and effective structure in response to the task
- control in the use of expressive and effective language appropriate to the task

Section B – Writing in Context

- understanding of the ideas and/or arguments relevant to the prompt/stimulus material
- effective use of detail from the selected text as appropriate to the task
- development in the writing of a coherent and effective structure in response to the task, and appropriate to the purpose, form and audience
- control in the use of language appropriate to the purpose, form and audience

Section C – Analysis of language use

- understanding of the ideas and points of view in the material presented
- analysis of ways in which language and visual features are used to present a point of view and to persuade readers
- control of the mechanics of the English language to support meaning
