## SPECIALIST MATHEMATICS <br> Written examination 1

Thursday 8 June 2017
Reading time: 2.00 pm to 2.15 pm ( $\mathbf{1 5}$ minutes) Writing time: 2.15 pm to 3.15 pm (1 hour)

## QUESTION AND ANSWER BOOK

Structure of book

| Number of <br> questions | Number of questions <br> to be answered | Number of <br> marks |
| :---: | :---: | :---: |
| 11 | 11 | 40 |

- Students are permitted to bring into the examination room: pens, pencils, highlighters, erasers, sharpeners and rulers.
- Students are NOT permitted to bring into the examination room: any technology (calculators or software), notes of any kind, blank sheets of paper and/or correction fluid/tape.

## Materials supplied

- Question and answer book of 10 pages.
- Formula sheet.
- Working space is provided throughout the book.

## Instructions

- Write your student number in the space provided above on this page.
- Unless otherwise indicated, the diagrams in this book are not drawn to scale.
- All written responses must be in English.

At the end of the examination

- You may keep the formula sheet.

Students are NOT permitted to bring mobile phones and/or any other unauthorised electronic devices into the examination room.

## THIS PAGE IS BLANK

## Instructions

Answer all questions in the spaces provided.
Unless otherwise specified, an exact answer is required to a question.
In questions where more than one mark is available, appropriate working must be shown.
Unless otherwise indicated, the diagrams in this book are not drawn to scale.
Take the acceleration due to gravity to have magnitude $g \mathrm{~ms}^{-2}$, where $g=9.8$

Question 1 (3 marks)
A 5 kg mass on a smooth plane inclined at $30^{\circ}$ is held in equilibrium by a horizontal force of magnitude $P$ newtons, as shown in the diagram below.

a. On the diagram above, show all other forces acting on the mass and label them.

Question 8 (3 marks)
A 3 kg mass has velocity $v \mathrm{~ms}^{-1}$, where $v=2 \arctan \sqrt{x}$ when it has a displacement $x$ metres from the origin, $x>0$.

Find the net force, $F$ newtons, acting on the mass in terms of $x$.

Question 9 (4 marks)
The random variables $X$ and $Y$ are independent with $\mu_{X}=4, \operatorname{var}(X)=36$ and $\mu_{Y}=3, \operatorname{var}(Y)=25$.
a. The random variable $Z$ is such that $Z=2 X+3 Y$.
i. Find $\mathrm{E}(Z)$.
ii. Find the standard deviation of $Z$.
$\qquad$
$\qquad$
$\qquad$
b. Researchers have reason to believe that the mean of $X$ has decreased. They collect a random sample of 64 observations of $X$ and find that the sample mean is $\bar{X}=3.8$
i. State the null hypothesis and the alternative hypothesis that should be used to test that the mean has decreased.
$\qquad$
$\qquad$
ii. Calculate the mean and standard deviation for a distribution of sample means, $\bar{X}$, for samples of 64 observations.
