TASK

Part 1
Write a note-form summary of the article, Keyed In, found on pages 14 and 15.
Your response must be in note form. Do not use complete sentences.

AND

Part 2
Write a piece of prose that explains how language and visual features have been used in Keyed In to attempt to persuade readers about three of the main points in the online article.

Background information
The following opinion piece appeared in Ctrl Alt, an online journal. It was posted earlier this year in response to the increasing debate about the impact of digital technology.
Why are some people so afraid of digital technology? There are some people who are naturally afraid of the new, challenged by the discomfort of being moved from the known, the safe, the predictable – in short, their comfort zone. They take the view ‘if it works, why change it?’ Mostly it is older people who, because they are less familiar with digital technology, are suspicious and afraid of it. But what are they afraid of?

Other people are really excited by new things. They’re excited by the possibility of the unknown, what the expanding universe can really do for them. They want to grab the future with both hands and make it happen. However, you’ve all taken the first step in this direction by having enough skills to use the Internet to read this article.

As you know, we already have technology that has revolutionised human experience and the way we live. The microscope opened up new worlds, and the telescope let us look at ones that we hadn’t seen before. If people stopped learning maths tables when calculators came in, that’s because something better came along. People didn’t stop using their brains; they just used their brains for different things like inventing the Net! This has revolutionised the way we communicate and might revolutionise the way we learn and think.

But there are still some people who are really worried that digital technology will diminish our mental capacities. For instance, this is what I got from a Podcast:

‘The screen culture has created an environment which is bombarding you with boom, biff and bash images, what I call the “yuck and wow” scenario, where every moment you’re having something hurt your ears and flash up in your face.
All I’m suggesting is that because our brain is designed to be adaptable, this screen culture will change our brain connections and brain cells in unknown ways; for example, this could result in people not being able to concentrate on one thing for very long.’

I think the opposite is true. I agree with those who can see that by using digital technology and the human brain together, human beings can become even more intelligent. Adventurous people will want to see whether that can happen. They will want to know where we can go, whether we can solve the riddles of
the universe, find cures faster, find ways of preserving the planet, end war and violence. Then people everywhere can lead happy, safe, and fulfilling lives in a free and peaceful world. OK, it’s a dream – but we need dreams, and digital technology is the tool to achieve them in the modern world. Why wouldn’t you want it in your life?

Global shopping, online banking, working out the itinerary of your holiday, looking up Google Maps and Street View to check out where your friends live, and that’s not to mention Facebook and keeping in touch and keeping up: these are fantastic advantages which have already proved themselves. Sure, some people stress about privacy issues, but these issues can be resolved. Besides, privacy issues are not restricted to the Net. Only yesterday, a hot air balloon was hovering over my back garden and the people on board could easily see through my windows!

Bring it on, I say. If you don’t agree, you can always put your computer on eBay and buy a stack of stationery with the money, if that’s your thing, but what a loser you’d be. It’s all about getting faster and being more efficient, staying in touch and connected. The future is here now, and I like the look of it.
